

Influenza Immunization Campaigns for Healthcare Personnel A New Approach

Call for Organizations to Participate in a Research Study Providing Methods and Tools to Increase Immunization Rates of Healthcare Personnel

The Canadian Healthcare Influenza Immunization Network is seeking Canadian Healthcare Organizations who are motivated to increase the number of healthcare personnel receiving the influenza vaccine each year.

The network has developed a Guide and Tool Kit that uses up-to-date, evidence-based information designed to help campaign managers, senior management, administration plan and implement their annual campaign.

If your organization is interested in receiving more information, please contact:
