Do Vaccines Cause That?!

Do Vaccines Cause Autism, Asthma, Diabetes?

Do Vaccines Cause That?! is a must-read book for parents, health professionals, journalists and educators concerned about the safety of vaccines. Get straight, science-based answers to this and other questions about the safety of vaccines.

You want to do what is best for your child. But there is so much conflicting information out there! Whom to believe? Although science does not provide answers to all the questions that concern you, science is the best tool we have to get reliable answers. While we can't make your child's world completely safe, we can help you make it safer. How? By helping you get the information you need to protect your child against serious diseases.

You'll learn how to:

- Balance the risks and benefits of immunizations for your child.
- Recognize red flags that should raise alarms about vaccine-related information you read in the media.
- Determine whether or not a vaccine is the cause of an adverse event or disease.

This guide will help you sort through all the misinformation that makes it hard to decide what's best for your child's health.
